

DNA polymerase kappa, functional

10-105 50 ug

Mammalian **DNA polymerase κ** , a member of the UmuC/DinB nucleotidyl transferase superfamily, has been implicated in spontaneous mutagenesis (1). **Human DNA polymerase κ** copies undamaged DNA with average single-base substitution and deletion error rates of 7×10^{-3} and 2×10^{-3} , respectively. These error rates are high when compared to those of most other DNA polymerases (2). **DNA polymerase κ** has important role in the mutagenic bypass of certain types of DNA lesions (3).

This product was over-expressed as a recombinant protein in *E. coli* with a plasmid carrying a C-terminal histidine-tagged human **DNA polymerase κ** (1-560 aa), and highly purified by several steps of chromatography (2). The product is catalytically active and its molecular weight is 65 kD (Fig 1). Activity of this product has been confirmed by a user researcher even if it was diluted 8,000-fold.

Application

- 1) Functional studies on translesion DNA synthesis by DNA polymerase kappa
- 2) Antigen for western blotting and ELISA by anti-Pol kappa antibody

Purity: Over 90% by SDS-PAGE (CBB staining)

Protein concentration: 3.2 mg/ml as measured by BCA method

Form: 0.2 M NaCl, 10 mM sodium phosphate buffer (pH 7.0), 50% glycerol

Storage: Sent at 4°C or at -20°C. Upon arrival, centrifuge briefly and store at -20°C or at -80°C for longer storage.

Data Link: UniProt KB/Swiss-Prot [Q9UBT6](#) (POLK_HUMAN)
